Student group releases Alexa skill to support Alzheimer's patients

MUNICH, Germany, January 24th, 2020 -- The skill guides users through a wide variety of daily routines, helps them remember things and provides confidence.

"As an Alzheimer's patient, I always find it difficult to remember various tasks that belong together, or to be sure that I haven't forgotten anything," said Max Mustermann. With this Alexa skill we pick up on this uncertainty and guide users through predefined processes.

We are confident that we can make life easier for numerous Alzheimer's patients with that way. Users will have certainty that a procedure works and has been completed. This increases their quality of life.

As of today, the "Ablaeufe" skill is available in the skill section on Amazon for everyone in German-speaking countries. It is free of charge and can be activated on all Amazon Echo devices, the Alexa app and other compatible devices.

For more information on this skill and how to activate it, visit <https://www.amazon.de/gp/product/XXXXXXXXXX>.
